

Evidence.ai — The AI Operating System for Digital Forensics & Investigations

“In the age of infinite synthetic content, truth needs an operating system.”

Executive Summary

As AI-generated content floods every platform and deepfakes become indistinguishable from reality, a critical infrastructure gap emerges: **traditional investigation and forensics tools were built for a pre-AI world**. Evidence.ai creates the first AI-native operating system for digital forensics, investigations, and evidence management—enabling law enforcement, legal teams, enterprises, and insurers to find truth in an ocean of synthetic noise.

The Opportunity: The combined digital forensics (\$15B), eDiscovery (\$16B), corporate investigations (\$9B), and insurance fraud detection (\$8B) markets represent a \$48B+ opportunity undergoing a generational platform shift. Legacy tools (Cellebrite, Relativity, FTK) weren’t designed for AI-generated content, multi-terabyte evidence sets, or cross-platform investigations. Evidence.ai becomes the intelligence layer for the post-AI investigation era.

The Problem

The Investigation Crisis in the AI Age

1. Synthetic Content Explosion

- AI-generated text, images, audio, and video are flooding every platform
- Deepfakes can fabricate evidence or alibis with near-perfect fidelity
- Traditional forensic tools can’t distinguish synthetic from authentic content
- GitHub bots, review spam, social media manipulation at unprecedented scale

2. Data Volume Overwhelm

- Average corporate investigation involves 5TB+ of data
- Law enforcement cases can span dozens of devices, platforms, and jurisdictions
- Human investigators can only review 50-100 documents per day
- 95% of potentially relevant evidence is never examined

3. Fragmented Tooling

- Digital forensics: Cellebrite, FTK, EnCase (separate tools)
- eDiscovery: Relativity, Disco, Everlaw (another stack)
- OSINT: Manual processes, cobbled-together scripts
- No unified intelligence layer connecting these workflows

4. Chain of Custody Challenges

- AI-assisted evidence handling creates authentication questions
 - Courts increasingly scrutinizing digital evidence integrity
 - No standard for AI-involved forensic processes
 - Admissibility at risk without proper documentation
-

The Solution: Evidence.ai

The Investigation Operating System

Evidence.ai is a unified platform that transforms how investigations are conducted in the AI age:

Core Platform Capabilities

1. Universal Evidence Ingestion

Multi-Source Collection: - Mobile device forensics (iOS, Android, feature phones) - Computer forensics (Windows, macOS, Linux, cloud workstations) - Cloud service extraction (M365, Google Workspace, AWS, Azure) - Social media preservation (posts, DMs, stories, metadata) - Communication platforms (Slack, Teams, Discord, Signal, WhatsApp) - IoT and vehicle data (smart home, telematics, wearables) - Blockchain and cryptocurrency transactions

Intelligent Processing: - Automatic file type detection and parsing - OCR for images and documents - Audio/video transcription with speaker identification - Metadata extraction and normalization - De-duplication and near-duplicate detection - Language detection and translation

2. Synthetic Content Detection Suite

AI-Generated Content Identification:

- Stylometric analysis
- Perplexity scoring
- Source model identification
- Metadata inconsistencies
- Lighting/shadow analysis
- Temporal consistency

AUDIO ANALYSIS

- Voice synthesis detection
- Cloning identification
- Splicing detection
- Background audio analysis

DOCUMENT ANALYSIS

- Font/formatting analysis
- Creation metadata
- Modification history
- Signature verification

Confidence Score: 0-100% Explainable Results Court-Ready

Provenance Tracking: - C2PA manifest verification - Cross-platform content tracing - Original source identification - Modification history reconstruction

3. AI-Powered Analysis

Pattern Recognition: - Communication pattern analysis (who talks to whom, when, about what) - Financial transaction mapping - Location pattern analysis - Behavioral anomaly detection - Document clustering and topic modeling

Entity Extraction & Resolution: - People, organizations, locations, dates - Phone numbers, email addresses, IP addresses - Cryptocurrency addresses - Vehicle identifications - Cross-reference against known entities

Timeline Construction: - Automatic event detection and sequencing - Multi-source timeline integration - Gap analysis and missing evidence identification - Alibi verification and conflict detection

4. Investigation Intelligence

Hypothesis Engine:

Given the evidence, the AI suggests:

HYPOTHESIS 1: Insider Trading (87% confidence)

Supporting Evidence

- Email: CFO to suspect, April 15, "quarterly numbers"
- Trade: Suspect bought options April 16
- Call records: 3 calls between parties

Contradicting Evidence

- Calendar: Suspect in meeting during alleged call

Recommended Actions

- Subpoena: Phone records from carrier
- Interview: Meeting attendees
- Analysis: Trading account history

HYPOTHESIS 2: Coincidental Timing (13% confidence)

Supporting Evidence

- Market momentum: Sector-wide buying

Recommended Actions

- Analysis: Sector trading patterns

Connection Mapping: - Visual graph of relationships between entities - Strength-of-connection scoring - Hidden relationship discovery - Network analysis (centrality, clustering)

Lead Generation: - AI-identified investigative leads - Prioritized by potential impact - Linked to supporting evidence - Assigned confidence scores

5. Evidence Vault

Chain of Custody: - Every action logged with timestamp and user - Cryptographic hashing at each stage - Blockchain anchoring for immutability - Full audit trail for court admissibility

Access Control: - Role-based permissions - Matter-based segregation - Attorney-client privilege protection - Need-to-know enforcement

Export & Reporting: - Court-ready evidence packages - Customizable report templates - Load file generation for eDiscovery platforms - Expert witness support materials

Technology Architecture

Multi-Model AI Stack

EVIDENCE.AI TECH STACK

FOUNDATION MODELS

- Evidence-LLM: Fine-tuned for investigative reasoning
- Synthetic-Detect: Ensemble model for AI content detection
- Entity-Graph: Knowledge graph construction and reasoning
- Vision-Forensics: Image/video analysis models

SPECIALIZED MODELS

- Deepfake detection (per-modality)
- Document classification
- Sentiment and intent analysis
- Handwriting analysis
- Voice biometrics

INFRASTRUCTURE

- Air-gapped deployment options
- On-premise for sensitive investigations
- FedRAMP High / StateRAMP certified cloud
- End-to-end encryption

Security & Compliance

Certifications: - SOC 2 Type II - FedRAMP High - StateRAMP - CJIS compliant - ISO 27001 - GDPR ready

Deployment Options: - SaaS (for enterprise and legal) - Private cloud (for government) - On-premise (for law enforcement, intelligence) - Air-gapped (for classified environments)

Market Opportunity

Total Addressable Market: \$48B+

MARKET OPPORTUNITY

DIGITAL FORENSICS \$15.2B

- Law enforcement forensic tools
- Incident response and breach investigation
- Growing 12% CAGR

eDISCOVERY \$16.1B

- Legal discovery platforms
- Litigation support services
- Growing 9% CAGR

CORPORATE INVESTIGATIONS \$8.7B

- Internal investigations
- Due diligence
- Fraud detection

INSURANCE FRAUD DETECTION \$7.9B

- Claims investigation
- SIU automation
- Growing 15% CAGR

TOTAL ADDRESSABLE MARKET \$47.9B

Market Drivers

1. **AI Content Explosion:** Every investigation now involves AI-generated content
2. **Data Volume Growth:** Average case size growing 35% annually
3. **Regulatory Pressure:** New requirements for digital evidence handling
4. **Deepfake Threat:** Courts and insurers demanding authentication
5. **Tool Consolidation:** Desire to reduce point solution sprawl

Competitive Landscape

Current Market (Legacy Players)

Category	Players	Limitation
Device Forensics	Cellebrite, Graykey, MSAB	No AI analysis, device-focused
Computer Forensics	EnCase, FTK, X-Ways	Legacy architecture, no AI detection
eDiscovery	Relativity, Disco, Everlaw	Document-centric, limited forensics
OSINT	Maltego, SpiderFoot	Manual workflows, no AI integration

Category	Players	Limitation
Deepfake Detection	Point solutions	Narrow scope, not investigation-integrated

Evidence.ai Differentiation

	Legacy Tools	Evidence.ai
AI Detection	None	Comprehensive
Unified Platform	Fragmented	End-to-end
Intelligence Layer	Manual analysis	AI-powered
Chain of Custody	Basic	Blockchain-anchored
Multi-modal	Specialized	All evidence types
Modern Architecture	On-premise	Cloud-native
Time to Insight	Weeks	Hours

Business Model

Revenue Streams

1. Platform Subscriptions

TIER	PRICE/YEAR	TARGET CUSTOMER
Investigator	\$25K	Small agencies, boutique firms
Professional	\$100K	Mid-size agencies, law firms
Enterprise	\$500K+	Large agencies, Am Law 100
Government	Custom	Federal, state agencies

2. Consumption-Based - Data processing: \$0.10/GB ingested - AI analysis: \$0.05/document analyzed - Synthetic detection: \$0.25/item deep-scanned - Storage: \$0.02/GB/month

3. Professional Services - Implementation and training - Custom model development - Expert witness support - Managed investigation services

Unit Economics

Metric	Value
Average Contract Value (ACV)	\$150K
Gross Margin	78%
Net Revenue Retention	135%
CAC Payback	14 months
LTV:CAC	5.2x

Go-to-Market Strategy

Phase 1: Law Enforcement (Months 0-12)

Why Start Here: - Desperate for AI-era tools - High willingness to pay for results - Strong word-of-mouth in community - Reference customers unlock government sales

Initial Targets: - State bureaus of investigation - Major metropolitan police departments - Federal task forces - Regional fusion centers

Partnerships: - IACP (International Association of Chiefs of Police) - State and local law enforcement associations - Forensic training academies

Phase 2: Legal/eDiscovery (Months 6-18)

Why Legal: - Massive case volumes - AI content becoming standard in litigation - Existing tech-forward buyers - High-value contracts

Initial Targets: - Am Law 100 firms - Big 4 forensic practices - Litigation support providers - Corporate legal departments

Partnerships: - EDRM (eDiscovery reference model) - Legal technology associations - Bar associations

Phase 3: Insurance (Months 12-24)

Why Insurance: - Fraud costs \$80B+ annually - AI-generated fraud claims emerging - Strong ROI case - Recurring investigation volumes

Initial Targets: - Top 20 P&C insurers - Special investigation units (SIUs) - Claims management companies - InsurTech platforms

Phase 4: Enterprise (Months 18-36)

Use Cases: - Internal investigations - M&A due diligence - Compliance monitoring - Competitive intelligence - Brand protection

Traction & Milestones

Current Status: Pre-Launch

Completed: - Core platform architecture - Synthetic detection models (85%+ accuracy) - Evidence ingestion pipeline - Chain of custody system

In Development: - Investigation intelligence layer - Government security certifications - Integration APIs

12-Month Roadmap

Quarter	Milestone
Q3 2026	Beta launch with 5 law enforcement partners
Q4 2026	GA launch, first \$1M ARR
Q1 2027	FedRAMP In Process, 25 customers
Q2 2027	Legal vertical launch, \$5M ARR

36-Month Vision

- 500+ agency/enterprise customers
 - \$75M ARR
 - FedRAMP High authorized
 - International expansion (UK, EU, AU)
 - Platform ecosystem with third-party apps
-

Financial Projections

Revenue Forecast

Year	ARR	Customers	Employees
2026	\$2M	15	25
2027	\$15M	85	75
2028	\$50M	250	180
2029	\$120M	600	350
2030	\$250M	1,200	600

Funding Requirements

Seed Round: \$5M (Current) - Complete platform development - Initial go-to-market - Security certifications

Series A: \$25M (Q1 2027) - Scale sales team - FedRAMP completion - Legal vertical expansion

Series B: \$75M (Q1 2028) - International expansion - Insurance vertical - Platform ecosystem

Team Requirements

Founding Team Profile

CEO: Enterprise software executive with government/legal background **CTO:** AI/ML leader with security clearance, forensics experience **CPO:** Product leader from eDiscovery or forensics industry **CSO:** Former law enforcement with federal investigation experience

Key Hires (Year 1)

- VP Engineering (AI/ML infrastructure)
 - VP Sales (government/enterprise experience)
 - Head of Customer Success
 - Director of Security & Compliance
 - Lead Data Scientists (3-4)
 - Security Engineers (2-3)
-

Risk Factors & Mitigations

Risk	Mitigation
Long government sales cycles	Start with state/local, build federal references
Security/compliance burden	Hire dedicated compliance team early
AI accuracy concerns	Maintain human-in-loop, clear confidence scoring
Evidence admissibility	Partner with forensic associations, get legal validation
Competitive response	Move fast, build moat through integrations and data
Technical complexity	Start focused, expand deliberately

The Vision

Why Now?

1. **The AI Tsunami:** Every investigation will involve AI-generated content within 2 years
2. **Legacy Tool Crisis:** Current tools fundamentally inadequate for AI-era investigations
3. **Model Maturity:** AI capabilities finally sufficient for forensic-grade analysis
4. **Market Consolidation:** Buyers want unified platforms, not more point solutions
5. **Regulatory Momentum:** New requirements for AI content handling emerging

The Endgame

Evidence.ai becomes the **trusted intelligence layer** for every investigation in the AI age:

- **Law enforcement** solves cases faster with AI-powered analysis
- **Legal teams** handle discovery in hours instead of weeks
- **Corporations** investigate incidents with confidence
- **Insurers** detect fraud before paying claims
- **Governments** protect institutions from synthetic threats

In a world where anything can be faked, **truth becomes the ultimate premium product**. Evidence.ai is the operating system for finding it.

Call to Action

We're raising a **\$5M seed round** to:

1. Complete platform development
2. Launch with 5 design partner agencies
3. Begin government security certifications
4. Build initial sales and customer success team

Seeking: - Lead investor with government/enterprise SaaS experience - Strategic angels from law enforcement, legal tech, forensics - Advisors with federal contracting expertise

"The truth is out there. We help you find it."
