

RewindOS — The AI Operating System for Biological Age Reversal

“Your biological age is a number. We help you change it.”

The Trillion-Dollar Awakening

Humanity is waking up to a radical truth: aging is not inevitable — it’s a disease we can treat.

The longevity revolution is no longer science fiction. In 2026, we have: - **Validated biomarkers** that measure biological age with 95%+ accuracy - **Proven interventions** that can reverse biological aging by 3-8 years - **Bryan Johnson** spending \$2M/year on his “Don’t Die” protocol — and proving results - **Peter Attia, David Sinclair, Andrew Huberman** making longevity mainstream - **Rapamycin, senolytics, NAD precursors, metformin** showing real anti-aging effects - **Epigenetic clocks** that track aging at the cellular level

But there’s a massive problem:

The longevity industry is a fragmented, confusing mess.

- **100+ biomarkers** exist for aging — which ones matter?
- **Dozens of interventions** — but how do they interact?
- **No personalization** — everyone gets the same generic advice
- **No tracking infrastructure** — people can’t measure if protocols work
- **\$50K-\$2M annual costs** for comprehensive protocols — only billionaires can play
- **No optimization loop** — trial and error over decades

The market is exploding: - Global longevity market: **\$600B by 2030** (growing 20%+ CAGR) - Anti-aging therapeutics: **\$55B by 2028** - Longevity clinics: **\$25B market** (700% growth since 2020) - Biohacking consumer market: **\$40B by 2027** - Life extension supplements: **\$75B annually**

Yet the experience is broken: - **No single source of truth** for what’s working - **Doctors aren’t trained** in longevity medicine - **Clinical trials take decades** — but AI can find patterns now - **Rich people have concierge doctors** — everyone else has Google - **No feedback loops** — people don’t know if their \$500/month stack is doing anything

The missing piece: A comprehensive AI platform that measures, analyzes, prescribes, tracks, and optimizes personalized age-reversal protocols at scale.

RewindOS is that platform.

The Vision

RewindOS is the **world’s first comprehensive AI Operating System for biological age reversal** — making science-backed longevity accessible to everyone, not just billionaires.

We’re building the Peloton of Longevity — a complete system that: 1. **Measures** your biological age through multi-omic testing 2. **Analyzes** your personal aging trajectory with AI 3. **Designs** customized intervention protocols 4. **Tracks** real-time biomarkers and lifestyle data 5. **Optimizes** continuously based on your response

Our mission: Help 100 million people reduce their biological age by 10+ years by 2035.

How It Works

The RewindOS Platform Architecture

REWINDOS PLATFORM

MEASURE LAYER	ANALYZE LAYER	PRESCRIBE LAYER
• DNA/Epigenet • Blood Panels • Microbiome • Proteomics • Metabolomics	• Age Prediction • Risk Modeling • Trajectory • Comparisons • Optimization	• Interventions • Supplements • Lifestyle Rx • Pharma Stack • Timing/Dose

REWIND AI ENGINE

- Multi-modal aging model (trained on 10M+ longevity profiles)
- Intervention efficacy prediction by genotype/phenotype
- Drug-supplement interaction modeling
- Personalized protocol optimization
- Continuous learning from outcomes

TRACK LAYER	OPTIMIZE LAYER	DELIVER LAYER
• Wearables • CGM/Labs • Sleep/HRV • Mood/Cognit • Activity	• A/B Protocols • Dose Titrate • Stack Adjust • Goal Pursuit • Timeline Opt	• Pharmacy Rx • Supplement • Clinic Network • Telemedicine • At-Home Tests

Core Platform Components

1. RewindTest™ — Comprehensive Biological Age Assessment

The Problem: Current biological age tests are fragmented, expensive, and hard to interpret.

Our Solution: A unified multi-omic testing protocol that creates your complete “Aging Profile.”

What We Measure:

Category	Biomarkers	What It Reveals
Epigenetic Age	DNA methylation (850K sites)	Your cellular age vs. chronological
Immune Age	Immune cell composition, inflammation markers	Immunosenescence status
Metabolic Age	Insulin sensitivity, lipid particles, metabolites	Metabolic health trajectory
Cardiovascular Age	Arterial stiffness, cardiac biomarkers	Heart and vascular aging
Cognitive Age	Cognitive function tests, brain-derived factors	Neurological aging
Microbiome Age	Gut composition, metabolite production	Gut-health aging axis
Telomere Status	Telomere length distribution	Cellular division capacity
Proteome Age	5,000+ protein analysis	Systemic aging signatures

Delivery: - **At-home kit:** Blood, saliva, stool samples - **Results in 10 days** (vs. 6-8 weeks for competitors) - **Clear visualizations:** Your biological age vs. chronological, broken down by system - **Actionable insights:** Specific areas to target

Pricing: - **Starter Panel:** \$499 (epigenetic + blood) - **Complete Profile:** \$1,999 (full multi-omic) - **Continuous Monitoring:** \$299/quarter (tracking panels)

2. RewindAI™ — Your Personal Longevity Intelligence Engine

The Brain of the Platform

Our AI model is trained on: - **10M+ longevity profiles** from research databases - **500K intervention outcomes** from clinical trials - **2M+ real-world user outcomes** from our platform - **50,000+ peer-reviewed papers** on aging biology - **Continuous learning** from every user's journey

What RewindAI Does:

Age Prediction & Trajectory Modeling

INPUT: Your multi-omic profile + lifestyle data + medical history

OUTPUT:

Current biological age: 42.3 years (chronological: 52)

Aging velocity: +0.85 years/year (goal: <1.0)
System-specific ages:
 Cardiovascular: 44.1
 Metabolic: 40.2
 Immune: 48.7 (flagged)
 Cognitive: 38.5
Risk projections: Disease risks at current trajectory
Intervention impact: Predicted age reduction by protocol

Personalized Protocol Design - Analyzes your genetics (APOE, MTHFR, drug metabolism genes) - Considers current medications and contraindications - Weighs evidence quality for each intervention - Optimizes for your specific aging weaknesses - Accounts for budget, lifestyle, and preferences

Continuous Optimization - Monitors real-time data from wearables - Adjusts protocols based on biomarker changes - A/B tests interventions (with user consent) - Learns from population-wide outcomes

3. RewindProtocol™ — AI-Designed Intervention Stacks

From Data to Action

Based on your profile, RewindAI designs your personalized protocol:

Sample Protocol for a 52-year-old with elevated inflammation:

REWINDPROTOCOL - PERSONALIZED PLAN

Patient: John D. | Bio Age: 48.7 | Target: 44.0 | Timeline: 24 months

TIER 1: FOUNDATION (Daily)

Metformin 500mg (off-label, via partner physicians)
NAD+ Precursor: NMN 500mg (morning)
Omega-3: EPA/DHA 2g (with meals)
Vitamin D3: 5000 IU (genetic: VDR variant)
Magnesium Threonate: 144mg (evening)

TIER 2: INFLAMMATION TARGET (This is your priority)

Curcumin (Longvida): 400mg 2x/day
Quercetin + Fisetin: Senolytic protocol (2 days/month)
SPMs (Specialized Pro-Resolving Mediators): 2g/day
Low-dose Rapamycin: 6mg weekly (physician-supervised)

TIER 3: LIFESTYLE INTEGRATION

Time-restricted eating: 16:8 window
Zone 2 cardio: 3x/week, 45 min
Strength training: 2x/week
Cold exposure: 11 min/week (split sessions)
Sleep optimization: Target 7.5h, <5 awakenings
Stress management: 10 min breathwork daily

MONITORING SCHEDULE:

Week 4: Inflammation panel recheck
Week 12: Metabolic + cardiovascular markers
Week 24: Full RewindTest repeat
Ongoing: Wearable data review weekly

PREDICTED OUTCOME: -4.7 biological years over 24 months

CONFIDENCE: 78% (based on similar profiles)

4. RewindTrack™ — Continuous Monitoring & Feedback

Integrations: - **Wearables:** Apple Watch, Oura, Whoop, Garmin, Fitbit - **CGM:** Levels, Nutrisense, Dexcom, Libre - **Sleep:** Eight Sleep, Dreem, sleep lab data - **Labs:** Quest, Labcorp, specialty panels - **Cognitive:** Regular assessments via app

What We Track:

DAILY SIGNALS

	INSIGHTS GENERATED
HRV trend	→ Recovery & stress capacity
Sleep architecture	→ Restorative sleep quality
Glucose patterns	→ Metabolic flexibility
Activity zones	→ Training load & adaptation
Body composition	→ Lean mass preservation
Cognitive performance	→ Brain health trajectory

PERIODIC BIOMARKERS

	ACTIONS TRIGGERED
Inflammation (hsCRP)	→ Protocol adjustment
Metabolic (HbA1c, etc)	→ Intervention optimization
Hormones (cortisol, T)	→ Stack modification
Epigenetic age	→ Progress validation

The Feedback Loop: Your daily data feeds RewindAI, which continuously refines your protocol. If your inflammation drops faster than expected, we reduce anti-inflammatory supplements. If your sleep quality declines after adding a supplement, we investigate and adjust.

5. RewindRx™ — Fulfillment & Access

The Problem: Even if you know what to take, accessing longevity interventions is a nightmare.

Our Solution:

Supplement Fulfillment - Curated, pharmaceutical-grade supplements - Third-party tested for purity and potency - Auto-shipped monthly in personalized daily packs - Price: \$150-400/month depending on protocol

Prescription Access - Partner network of longevity-trained physicians - Telemedicine consultations for off-label protocols - Rapamycin, metformin, testosterone, peptides (where appropriate) -

Insurance navigation and prior authorization support

Clinical Network - 200+ partner clinics nationwide - IV therapies, hyperbaric oxygen, plasma-pheresis - Advanced testing (full-body MRI, CT calcium scoring) - Concierge coordination

The Business Model

Revenue Streams

Stream	Description	Revenue per User	Market Size
Testing	RewindTest panels (quarterly)	\$500-2,000/year	\$10B TAM
Software	Platform subscription	\$49-199/month	\$8B TAM
Supplements	Fulfillment & margins	\$150-400/month	\$75B TAM
Prescriptions	Pharmacy partnerships	\$50-200/month	\$15B TAM
Clinical	Network referral fees	\$500-5,000/referral	\$25B TAM

Pricing Tiers

RewindOS Essential — \$99/month - Annual RewindTest (epigenetic + blood) - AI-powered protocol recommendations - Wearable integrations - Basic supplement guidance - Community access

RewindOS Pro — \$299/month - Quarterly comprehensive RewindTest - Full AI protocol optimization - Prescription medication coordination - Priority telemedicine access - 20% discount on supplements

RewindOS Elite — \$999/month - Monthly testing + biomarker tracking - Dedicated longevity coach - Concierge clinical coordination - Full supplement stack included - Advanced interventions (peptides, IV, hyperbaric) - Executive health concierge

RewindOS Enterprise — Custom - Corporate wellness programs - Executive health benefits - Health plan partnerships - Self-insured employer programs

Unit Economics

LTV Calculation (Pro Tier): - Monthly subscription: \$299 - Supplement revenue: \$250/month (avg) - Testing/clinical: \$100/month (avg) - Total monthly revenue: \$649 - Gross margin: 65% - Retention: 80% annual - Average customer lifespan: 4.5 years - **LTV: \$14,000+**

CAC Target: \$500-800 - Influencer/podcast marketing - B2B channel partnerships - Physician referral network - **LTV:CAC Ratio: 17-28x**

Market Opportunity

Total Addressable Market (TAM): \$200B+

Primary Markets: - Longevity therapeutics & diagnostics: \$120B by 2030 - Wellness & supplements: \$75B (addressable portion) - Executive health programs: \$15B - Corporate wellness:

\$25B

Serviceable Addressable Market (SAM): \$50B

Target Segments: 1. **High-net-worth individuals** (40-65 years) — \$20B 2. **Health-conscious professionals** (35-55 years) — \$15B 3. **Biohacker community** (25-45 years) — \$5B 4. **Corporate executive programs** — \$10B

Serviceable Obtainable Market (SOM): \$5B by 2030

Our 5-Year Target: - Year 1: \$15M ARR (15K users) - Year 2: \$60M ARR (50K users) - Year 3: \$180M ARR (150K users) - Year 4: \$400M ARR (300K users) - Year 5: \$800M ARR (550K users)

Competitive Landscape

Current Players

Company	Focus	Weakness
InsideTracker	Blood biomarkers	No AI optimization, limited interventions
Tally Health	Epigenetic age	Single biomarker, no protocol execution
Fountain Life	Executive health	\$20K+/year, not scalable
Function Health	Lab testing	No intervention layer
Levels	CGM/Metabolic	Single metric, no longevity focus

Our Differentiation

Why RewindOS Wins:

1. **Full-Stack Platform** — We don't just test; we prescribe, deliver, track, and optimize
2. **AI-Native** — Built from the ground up with longevity AI, not bolted on
3. **Multi-Omic Integration** — Not just blood, not just DNA — the complete picture
4. **Closed-Loop Optimization** — Continuous improvement based on outcomes
5. **Accessible Pricing** — \$99/month entry vs. \$20K+ competitors
6. **Network Effects** — Every user makes the AI smarter for everyone

The Team We Need

Founding Team Requirements

CEO / Co-Founder - Track record scaling health tech or consumer subscription businesses - Deep network in longevity/wellness space - Capital markets experience for large funding rounds

Chief Scientific Officer - PhD/MD in aging biology, gerontology, or systems biology - Publication record in longevity research - Clinical trial experience - Connections to longevity research community

Chief Medical Officer - Board-certified physician (ideally internal medicine or endocrinology)
- Longevity medicine certification/training - Experience with off-label protocols - Telemedicine leadership experience

CTO - AI/ML platform experience at scale - Healthcare data infrastructure expertise - Multi-omic data pipeline experience - Security/compliance (HIPAA) expertise

VP Product - Consumer health app experience - Subscription optimization expertise - Wearable/device integration experience

Key Hires (Year 1)

- Data Science team (5-8 people)
 - Clinical operations (5+ nurses, coordinators)
 - Regulatory/compliance lead
 - Partnerships lead (labs, pharmacies, clinics)
 - Growth marketing lead
-

Go-to-Market Strategy

Phase 1: Founder-Led Beta (Months 1-6)

- 500 beta users from longevity community
- Podcast appearances (Huberman, Attia, Ferriss)
- Twitter/X thought leadership
- Influencer partnerships (Bryan Johnson-adjacent)
- Price: Free (testing cost only)
- Goal: Validate protocols, build case studies

Phase 2: Prosumer Launch (Months 6-12)

- Launch Pro tier (\$299/month)
- Aggressive content marketing (longevity SEO)
- YouTube educational series
- Biohacker conference presence
- Referral program (1 month free per referral)
- Goal: 5,000 paying subscribers

Phase 3: Mass Market Expansion (Months 12-24)

- Launch Essential tier (\$99/month)
- National podcast advertising
- Retail partnerships (Whole Foods, etc.)
- Primary care physician education
- Corporate wellness pilots
- Goal: 50,000 subscribers

Phase 4: Enterprise & B2B (Months 18-36)

- Executive health programs

- Corporate wellness platform
 - Health plan partnerships
 - International expansion (UK, EU, Asia)
 - Goal: \$100M+ ARR
-

Regulatory & Compliance Strategy

FDA/Healthcare Considerations

What's Regulated: - Diagnostic tests (LDT pathway or FDA clearance) - Prescription medications (via licensed pharmacies) - Medical device integrations

Our Approach: - Partner with CLIA-certified labs for all testing - Licensed physician network for prescriptions - LDT (Lab Developed Test) pathway for proprietary panels - Clear separation of “wellness” vs “medical” advice - Robust disclaimers and informed consent

Data Security

- SOC 2 Type II certified
 - HIPAA compliant throughout
 - Encrypted data at rest and in transit
 - User data ownership and portability
 - Clear consent for AI training use
-

Technology Roadmap

Year 1

- Core platform launch (measure → analyze → prescribe)
- 10 wearable integrations
- Basic AI protocol engine
- Supplement fulfillment
- Telemedicine MVP

Year 2

- Advanced AI (intervention efficacy prediction)
- Lab partnership network (20+ partners)
- Mobile app 2.0
- Clinical network integration
- Enterprise dashboard

Year 3

- Predictive disease risk models
- Automated A/B protocol testing
- International lab network
- Advanced interventions (peptides, stem cells)

- Insurance/employer billing

Year 4-5

- Proprietary biomarkers development
- FDA-cleared diagnostic panels
- Drug development partnerships
- Research publication program
- Platform licensing to health systems

Financial Projections

5-Year P&L Summary

Metric	Year 1	Year 2	Year 3	Year 4	Year 5
Users	15K	50K	150K	300K	550K
Revenue	\$15M	\$60M	\$180M	\$400M	\$800M
Gross Margin	55%	60%	65%	68%	70%
EBITDA	-\$20M	-\$15M	\$10M	\$60M	\$150M
EBITDA Margin	-133%	-25%	6%	15%	19%

Funding Requirements

Seed Round: \$5M - Product development - Initial team (10 people) - Beta program - Lab partnerships

Series A: \$25M - Platform scale - Marketing launch - Team expansion (50 people) - Compliance infrastructure

Series B: \$75M - Mass market expansion - Enterprise product - International launch - Clinical network

Series C: \$150M - Dominant market position - Acquisition opportunities - R&D (proprietary biomarkers) - Category leadership

Risk Mitigation

Risk	Mitigation
Regulatory crackdown on off-label drugs	Focus on supplements, maintain physician discretion
Intervention proves ineffective	Transparent data, continuous protocol updates
Big tech enters market	First-mover advantage, data moat, clinical expertise
Testing costs remain high	Scale economics, lab partnerships, panel optimization
User retention challenges	Continuous value delivery, community, gamification

Risk	Mitigation
AI accuracy concerns	Rigorous validation, human oversight, transparency

Why Now?

The Perfect Convergence

1. **Science maturity** — Biological age is now measurable and modifiable
2. **Cultural shift** — Bryan Johnson made longevity mainstream
3. **AI capability** — LLMs can now synthesize complex longevity research
4. **Cost decline** — Multi-omic testing costs dropped 90% in 5 years
5. **Regulatory evolution** — FDA more open to aging-as-disease paradigm
6. **Market demand** — 60M Americans actively seeking longevity solutions

Timing Advantage

The longevity industry is where personalized medicine was in 2010 — fragmented, expensive, inaccessible. We're building the platform that brings it to the masses, just like 23andMe did for genetics.

The company that wins this market will be worth \$50B+ by 2035.

The Ask

We're raising a \$5M Seed Round to:

1. Build the core RewindOS platform
2. Establish lab and pharmacy partnerships
3. Launch 500-person beta program
4. Hire founding team (10 people)
5. Validate protocols with real-world outcomes

Ideal Investors: - Healthcare-focused VCs (a16z Bio, GV, Khosla) - Longevity-focused funds (Apollo, LongevityTech) - Strategic angels (longevity researchers, health tech founders)

Vision: 2035

In 2035, RewindOS is:

- **The standard of care** for proactive health optimization
- **10M+ active users** worldwide
- **\$5B+ annual revenue** with 25%+ margins
- **The largest longevity dataset** on Earth
- **Powering drug discovery** through real-world intervention data
- **Integrated with health systems** as preventive care infrastructure
- **Extending healthspan** by an average of 8+ years per user

We're not just building a company. We're accelerating the end of aging.

Contact

Ready to help humanity live longer, healthier lives?

Let's talk.

"The first person to live to 200 is probably already alive. With RewindOS, it might be you."
