

TierZero AI — The Autonomous IT Support Platform

One-liner: AI agents that resolve 85% of IT tickets before a human ever sees them.

The Problem

Enterprise IT support is broken:

- **\$200B+ spent annually** on IT support services globally
- **Average ticket resolution:** 24+ hours for Tier 1, days for Tier 2
- **Employee productivity loss:** 22 minutes average per IT issue (while waiting for help)
- **IT staff burnout:** 70% of IT support time spent on repetitive, low-complexity tickets
- **Talent shortage:** 3.5M unfilled cybersecurity/IT positions globally
- **Shadow IT explosion:** Frustrated employees bypass IT, creating security risks

The current approach—human agents triaging tickets through outdated ITSM platforms—cannot scale. Every company with 500+ employees is drowning in password resets, access requests, VPN issues, and “my laptop is slow” tickets.

The AI agent revolution changes everything.

The Solution: TierZero AI

TierZero AI is the **autonomous IT support platform** that handles tickets from initial request through resolution—no human required for 85% of issues.

How It Works

Employee: "I can't access the sales dashboard"

↓

[TierZero AI Agent Activated]

↓

1. Intent Recognition
→ Access issue, SaaS app
2. Context Gathering
→ Check user permissions
→ Check app status
→ Check recent changes
3. Root Cause Analysis
→ SSO token expired
4. Autonomous Resolution
→ Trigger SSO re-auth flow
→ Verify access restored
5. Proactive Follow-up
→ "Access restored. Working?"

↓

Resolution: 47 seconds

Human involvement: 0

Core Capabilities

Autonomous Resolution Engine - Natural language understanding of any IT request - Integration with 200+ enterprise systems (AD, Okta, ServiceNow, Jira, AWS, Azure, etc.) - Ability to execute remediation actions safely within guardrails - Self-healing capabilities for common infrastructure issues

Enterprise Knowledge Brain - Ingests all IT documentation, runbooks, and past tickets - Learns from every resolution (human and AI) - Builds organization-specific knowledge graph - Understands your unique environment and policies

Security-First Architecture - Zero-trust execution model - Human-in-the-loop for sensitive actions - Full audit trail for compliance - Role-based action permissions

Predictive Intelligence - Identifies issues before users report them - Predicts ticket volume spikes - Recommends infrastructure improvements - Surfaces systemic problems

Why Now?

The Convergence

- AI Agents Are Production-Ready**
 - GPT-4, Claude, and open models can reason through complex IT scenarios
 - Tool-use and function-calling enable safe system interactions
 - Costs dropped 90% in 18 months
- Remote Work Made IT Harder**
 - Distributed workforce = more diverse issues
 - Can't walk to someone's desk to fix it
 - 24/7 support expectations
- Labor Economics Don't Work**
 - IT support salaries up 40% since 2020
 - Turnover in IT support: 30%+ annually
 - Training costs: \$15K+ per agent
- ITSM Platforms Stagnated**
 - ServiceNow, Zendesk, Freshservice = glorified ticket queues
 - Automation limited to basic workflows
 - No true intelligence layer

The AI IT Support Market Gap

Current Solutions	TierZero AI
Chatbots with decision trees	True reasoning agents
Ticket routing	Ticket resolution
Knowledge search	Knowledge synthesis + action
Human escalation default	Human escalation exception
Reactive only	Predictive + proactive

Business Model

Pricing Tiers

Starter — \$15/employee/month - Up to 1,000 employees - Core IT support automation - 50+ integrations - Email/chat channels

Enterprise — \$25/employee/month - Unlimited employees - Custom integrations - Advanced security controls - Dedicated success manager - SLA guarantees

Platform — Custom pricing - White-label capability - MSP/MSSP deployment - API access - Custom AI training

Unit Economics

- **Target Resolution Rate:** 85% autonomous
- **Average Enterprise Deal:** \$300K ARR (10K employees @ \$25)
- **Gross Margin:** 80%+ (AI inference costs declining rapidly)
- **Payback Period:** 2-3 months (vs. headcount savings)

Revenue Projections

Year	Customers	ARR	Growth
1	50	\$15M	-
2	200	\$60M	300%
3	600	\$180M	200%
4	1,500	\$450M	150%
5	3,000	\$900M	100%

Market Opportunity

Total Addressable Market (TAM)

- **Global IT Support Services:** \$200B
- **Enterprise ITSM Software:** \$12B
- **IT Helpdesk Market:** \$15B
- **Combined TAM:** \$227B

Serviceable Addressable Market (SAM)

- Companies 500+ employees with IT support needs
- ~150,000 companies globally
- Average potential deal: \$200K ARR
- **SAM: \$30B**

Serviceable Obtainable Market (SOM)

- Focus: North America + Western Europe
 - Target: Tech, Finance, Healthcare, Manufacturing
 - 5-year target: 3,000 customers
 - **SOM: \$900M ARR**
-

Competitive Landscape

Current Players

Traditional ITSM (ServiceNow, Freshservice, Zendesk) - Weakness: No true AI resolution, just workflow automation - TierZero advantage: Resolution, not just routing

IT Automation (Ansible, Puppet, Chef) - Weakness: Requires scripting, not intelligent - TierZero advantage: Natural language, adaptive learning

Chatbot Vendors (Moveworks, Espressive) - Weakness: Limited reasoning, high escalation rates - TierZero advantage: Full agent architecture, 2x resolution rates

Emerging AI IT (various startups) - Most are thin wrappers on LLMs - TierZero advantage: Deep integrations, enterprise trust

Competitive Moats

1. **Integration Depth:** Pre-built connectors to 200+ systems with action capabilities
 2. **Enterprise Knowledge Compounding:** More tickets = smarter system
 3. **Security Certifications:** SOC 2 Type II, ISO 27001, FedRAMP (roadmap)
 4. **Customer Lock-in:** Deep system integration creates switching costs
-

Go-to-Market Strategy

Phase 1: Design Partners (Months 1-6)

- 10 mid-market companies (1K-5K employees)
- Free deployment, intensive co-development
- Focus on tech and finance verticals
- Goal: Prove 80%+ resolution rate

Phase 2: Commercial Launch (Months 7-12)

- Land top 50 customers
- Outbound sales team (10 AEs)
- Channel partnerships with IT consultancies
- PR blitz: “The End of Tier 1 Support”

Phase 3: Market Expansion (Year 2+)

- Enterprise upmarket push
- International expansion (UK, Germany, Australia)
- MSP/MSSP partner program
- Industry-specific solutions

GTM Channels

Channel	Focus	CAC Target
Outbound Sales	Enterprise	\$50K
Inbound/Content	Mid-Market	\$15K
Partner Channel	SMB/Mid	\$10K
PLG (Self-Serve)	SMB	\$2K

Product Roadmap

Now: Core Platform

- IT ticket resolution for common issues
- 50 pre-built integrations
- Slack/Teams/Email channels
- Basic analytics

Q3 2026: Enterprise Ready

- 200+ integrations
- Custom guardrails and policies
- Advanced audit logging
- SSO/SCIM provisioning

Q4 2026: Predictive Intelligence

- Anomaly detection
- Proactive issue prevention
- Capacity planning recommendations
- Infrastructure health scores

2027: Autonomous IT Operations

- Self-healing infrastructure
- Automated change management
- AI-driven incident response
- Full AIOps integration

2028: Platform Ecosystem

- Marketplace for custom agents
 - Third-party integration framework
 - White-label for MSPs
 - Vertical-specific solutions
-

Team Requirements

Founding Team

- **CEO:** Enterprise SaaS experience, IT/security domain
- **CTO:** AI/ML background, distributed systems
- **VP Engineering:** Agent architecture, integrations
- **VP Sales:** Enterprise IT sales, ServiceNow/ITSM experience

Initial Hires (First 20)

- 8 Engineers (AI, backend, integrations)
 - 4 Sales (2 AE, 2 SDR)
 - 3 Customer Success
 - 2 Product
 - 2 Marketing
 - 1 Security/Compliance
-

Financial Requirements

Seed Round: \$5M

- Build core platform
- 10 design partner deployments
- Team of 12

Series A: \$20M (Month 12)

- Commercial launch
- Scale to 50 customers
- Team of 40

Series B: \$60M (Month 24)

- International expansion
- Enterprise upmarket
- Team of 150

Use of Funds (Seed)

Category	Allocation
Engineering	50%
Sales & Marketing	25%
G&A	15%
Infrastructure	10%

Key Metrics & KPIs

Product Metrics

- **Autonomous Resolution Rate:** Target 85%
- **Mean Time to Resolution:** Target <5 minutes
- **User Satisfaction (CSAT):** Target 4.5+/5
- **False Positive Rate:** Target <2%

Business Metrics

- **Net Revenue Retention:** Target 130%+
- **Gross Margin:** Target 80%+
- **CAC Payback:** Target <12 months
- **Logo Churn:** Target <5% annually

Risk Factors & Mitigations

Risk	Mitigation
AI errors causing damage	Guardrails, human-in-the-loop for sensitive actions, insurance
Enterprise security concerns	SOC 2, penetration testing, on-prem option
Integration complexity	Start with most common systems, expand based on demand

Risk	Mitigation
ServiceNow builds this Economic downturn	Move fast, focus on resolution not routing, different architecture IT support is cost center—automation sells better in downturn

Why This Wins

The Unlock

TierZero AI isn't just another chatbot or ITSM plugin. It's **the first true AI employee for IT support**.

The difference: - Chatbots answer questions → TierZero **solves problems** - ITSM routes tickets → TierZero **closes tickets** - Automation requires scripts → TierZero **figures it out**

The Economic Inevitability

Every enterprise CIO is asking: "How do we do more with less?"

TierZero delivers: - **60% reduction** in Tier 1 support costs - **80% faster** resolution times - **24/7 coverage** without night shifts - **Happier employees** (instant help) - **Happier IT staff** (interesting work only)

This isn't a nice-to-have. It's an economic inevitability.

The Ask

Raising: \$5M Seed **Use:** Build core platform, acquire 10 design partners, prove 85% resolution rate **Timeline:** 12 months to Series A metrics

Target Investors

- Enterprise SaaS specialists (Bessemer, Insight, Battery)
- AI-focused funds (Andreessen, Sequoia AI)
- Strategic angels (Former CIOs, IT leaders)
