

Witness — The Verification Layer for AI Work Delegation

“Witness every AI action. Verify every output. Trust your delegation.”

Generated: May 10, 2026 | Morning Drop

Sector: Enterprise AI Infrastructure / Quality Assurance

Stage: Pre-Seed to Series A Opportunity

Potential: \$50B+ TAM by 2030

The Burning Problem

The AI Delegation Trust Crisis Has Arrived

Research published this week confirms what enterprises are discovering the hard way: **LLMs corrupt your documents when you delegate**. Subtle modifications, hallucinated facts, instruction drift, and silent errors are plaguing every organization deploying AI agents.

The symptoms are everywhere: - Legal teams discovering AI-drafted contracts with invented clauses - Financial analysts finding AI reports with hallucinated numbers - Developers shipping AI-generated code with security vulnerabilities - Researchers citing AI-fabricated sources - Meta employees creating “agents to find agents, agents to rate agents” — pure chaos

The core issue: When you delegate work to AI, you have no reliable way to verify the AI did what you asked without corrupting, hallucinating, or deviating from your intent.

Current solutions are failing: - **Observability tools** (Datadog, AgentOps) tell you *that* something happened, not *whether it was correct* - **Fact-checking tools** verify individual claims, not entire workflows - **Human review** doesn’t scale and misses subtle corruptions - **AI reviewing AI** creates recursive trust problems

The billion-dollar question: How do you trust AI to do work on your behalf?

The Solution: Witness

Witness is the enterprise verification layer for AI work delegation.

When any AI agent performs work on behalf of humans, Witness:

1. Intent Capture

Before delegation begins, Witness captures: - Original source documents and data - Human instructions and specifications - Success criteria and constraints - Compliance requirements

2. Real-Time Monitoring

As the AI works, Witness observes: - Every action, tool call, and decision - Intermediate states and reasoning - Resource access and modifications - Deviation from expected behavior

3. Output Verification

When work completes, Witness validates: - Adherence to original specifications - Factual accuracy against source truth - Document integrity (no corruption) - Instruction compliance - Citation and reference verification

4. Trust Scoring & Certification

Witness provides: - Per-output confidence scores - Anomaly detection and alerts - Verification certificates for compliance - Audit trails for governance

5. Continuous Learning

The system improves through: - Human feedback on verification accuracy - Pattern detection across organizations - Industry-specific verification models - Emerging threat identification

Target Market

Primary Segments

1. Legal & Professional Services (\$15B market) - Law firms using AI for document drafting - Accounting firms with AI-assisted audits

- Consulting firms with AI research - Use case: Verify AI-drafted contracts have no invented clauses or hallucinated precedents

2. Financial Services (\$12B market) - Investment banks with AI-generated reports - Asset managers using AI for analysis - Insurance companies with AI claims processing - Use case: Ensure AI financial analysis contains no fabricated numbers or fake citations

3. Healthcare & Life Sciences (\$10B market) - Hospitals with AI clinical documentation - Pharma companies with AI research synthesis - Medical device companies with AI-assisted submissions - Use case: Verify AI medical summaries accurately reflect patient data

4. Enterprise AI Teams (\$13B market) - Companies deploying internal AI agents - Organizations using AI for code generation - Enterprises with AI customer service - Use case: Ensure AI-generated code has no security vulnerabilities or logic errors

Ideal Customer Profile

- **Company Size:** 500+ employees
- **AI Maturity:** Already deploying AI agents for knowledge work
- **Regulatory Exposure:** Compliance requirements (SOC2, HIPAA, SOX, etc.)
- **Pain Level:** Have experienced AI errors, hallucinations, or trust issues
- **Budget:** \$100K-\$1M+ annual AI infrastructure spend

Product Architecture

WITNESS PLATFORM

Intent Engine	Monitoring Layer	Verification Engine
• Doc capture • Spec parse • Constraint extraction	• Action log • Tool calls • Reasoning trace	• Spec compliance • Fact verification • Integrity check • Citation verify

Trust Scoring	Audit Trail	Learning Engine
• Confidence scores • Anomaly detection	• Immutable logs • Compliance reports	• Pattern detection • Org-specific models • Threat ID

INTEGRATIONS

OpenAI API	Anthropic	Google AI	Custom Models	Agent Frames
---------------	-----------	--------------	------------------	-----------------

Core Technologies

- Differential Analysis Engine**
 - Compares source documents to AI outputs
 - Detects unauthorized modifications
 - Identifies insertion/deletion patterns
 - Semantic drift detection
- Specification Language (WitnessSpec)**
 - Declarative language for defining expected outputs
 - Constraint specification for AI behavior
 - Automated spec extraction from natural language
 - Integration with existing AI prompts
- Multi-Modal Verification**
 - Text: Semantic comparison, fact extraction
 - Code: Static analysis, security scanning, logic verification
 - Data: Schema validation, statistical anomaly detection
 - Documents: Structure integrity, citation verification
- Cryptographic Audit Trail**
 - Immutable logging of all AI actions
 - Merkle tree-based verification
 - Compliance-ready export formats
 - Integration with enterprise audit systems

Business Model

Revenue Streams

1. Platform Subscription (80% of revenue)

Tier	Monthly Price	Included	Target
Starter	\$2,500/mo	10K verifications, 5 users	Small teams
Professional	\$10,000/mo	100K verifications, 25 users	Mid-market
Enterprise	\$50,000+/mo	Unlimited, SSO, custom	Large enterprise

2. Usage-Based Pricing (15% of revenue) - \$0.01-0.05 per verification (volume discounts) - Deep verification (multi-step): \$0.10-0.50 - Custom model training: \$10K-100K

3. Professional Services (5% of revenue) - Implementation and integration - Custom verification model development - Compliance consulting

Unit Economics

Metric	Value
ACV (Avg Contract Value)	\$180,000
CAC	\$45,000
Gross Margin	78%
LTV	\$720,000
LTV:CAC	16:1
Payback Period	9 months

Go-to-Market Strategy

Phase 1: Legal Tech Beachhead (Months 1-12)

Why Legal: - Highest pain (hallucinations in contracts = liability) - Regulatory pressure (bar associations scrutinizing AI use) - Budget available (law firms have money) - Clear ROI (avoiding malpractice suits)

Tactics: - Partner with 3-5 AmLaw 100 firms as design partners - Integrate with leading legal AI tools (Harvey, CoCounsel) - Publish thought leadership on AI verification in legal - Sponsor legal tech conferences (ILTACON, Legalweek)

Phase 2: Financial Services Expansion (Months 12-24)

Approach: - Leverage legal case studies for credibility - Target compliance-driven buyers (CCOs, Risk Officers) - SOC2 Type II certification - Partner with financial AI vendors (Kensho, FactSet)

Phase 3: Horizontal Enterprise (Months 24-36)

Expansion: - Healthcare (HIPAA compliance angle) - Manufacturing (quality assurance) - Government (accountability requirements) - General enterprise AI teams

Channel Strategy

- 1. Direct Sales** (60% of revenue)
 - Enterprise sales team for \$100K+ deals
 - Solution engineers for technical sales
 - 2. Partnerships** (30% of revenue)
 - AI platform partnerships (OpenAI, Anthropic, Google)
 - System integrators (Deloitte, Accenture)
 - Vertical software vendors (Harvey, Veeva)
 - 3. Self-Serve** (10% of revenue)
 - Developer-focused onboarding
 - Usage-based pricing for startups
-

Financial Projections

5-Year Forecast

Year	ARR	Customers	Employees	Burn
Y1	\$2M	15	25	\$8M
Y2	\$12M	80	75	\$15M
Y3	\$45M	250	180	\$20M
Y4	\$120M	600	400	\$10M
Y5	\$300M	1,200	800	Cash flow +

Funding Strategy

Round	Amount	Timing	Use of Funds
Pre-Seed	\$3M	Now	Team (8), MVP, initial customers
Seed	\$12M	Month 12	Scale team (30), product expansion
Series A	\$40M	Month 24	GTM expansion, platform buildout
Series B	\$100M	Month 36	International, market dominance

Competitive Analysis

Direct Competitors

Company	Focus	Weakness
Patronus AI	LLM evaluation	Testing, not production verification
Galileo	ML observability	Generic, not delegation-focused
TruEra	Model quality	ML-focused, not generative AI
Weights & Biases	Experiment tracking	Dev tools, not enterprise QA

Indirect Competitors

Category	Players	Our Differentiation
Observability	Datadog, New Relic	We verify correctness, not just activity
Fact-checking	Full Fact, Logically	We verify entire workflows, not claims
AI Security	Robust Intelligence	We focus on output quality, not attacks

Competitive Moats

1. **Proprietary Verification Models** - Trained on millions of AI delegation examples
2. **Intent Capture Technology** - Patent-pending spec extraction
3. **Enterprise Relationships** - Deep integrations with regulated industries
4. **Audit Compliance** - Only solution purpose-built for AI governance
5. **Network Effects** - Verification accuracy improves with scale

Ideal Founding Team

Required Roles

CEO / Co-founder - Background: Enterprise software GTM, ideally legal or financial tech - Network: Access to F500 buyers - Skills: Fundraising, strategic sales, vision

CTO / Co-founder - Background: ML infrastructure, LLM systems, distributed systems - Experience: Building AI products at scale (Google, Meta, OpenAI) - Skills: Architecture, team building, technical vision

VP Engineering - Background: Enterprise software development - Experience: SOC2, HIPAA compliant systems - Skills: Security, reliability, compliance

First 10 Hires

1. Senior ML Engineer (verification models)
2. Senior ML Engineer (NLP/fact extraction)
3. Senior Backend Engineer (platform)
4. Senior Backend Engineer (integrations)
5. Security Engineer (compliance)
6. Product Manager (enterprise)
7. Enterprise Account Executive
8. Solutions Engineer
9. Customer Success Manager
10. Developer Advocate

Risks & Mitigations

Technical Risks

Risk	Probability	Impact	Mitigation
Verification accuracy insufficient	Medium	High	Start with constrained domains, iterate
Latency impacts UX	Medium	Medium	Async verification, edge deployment
AI model changes break system	High	Medium	Model-agnostic architecture, rapid adaptation

Market Risks

Risk	Probability	Impact	Mitigation
AI platforms add native verification	Medium	High	Deep specialization, enterprise relationships
Enterprises slow to adopt AI agents	Low	High	Problem exists today, market already here
Regulatory uncertainty	Medium	Medium	Position as compliance enabler

Execution Risks

Risk	Probability	Impact	Mitigation
Enterprise sales cycle too long	High	Medium	Land-and-expand, start with POCs
Talent competition	High	Medium	Equity, mission, technical challenge
Burn rate	Medium	High	Milestone-based spending, capital efficiency

The Vision

Year 1: The trusted verification layer for AI-assisted legal work. Every major law firm knows that AI without Witness is negligence waiting to happen.

Year 3: The standard for AI delegation in regulated industries. “Witnessed” becomes a quality certification that enterprises require for any AI output.

Year 5: The infrastructure layer that enables autonomous AI agents to be trusted with high-stakes work. Witness is to AI delegation what SSL is to internet commerce.

Year 10: Witness becomes essential infrastructure for the AI economy. Every transaction, every decision, every piece of work touched by AI has Witness verification built in.

The billion-dollar outcome: Witness is acquired by a major cloud provider (Microsoft, Google, AWS) for \$5-10B or IPOs as the defining AI governance company.

Call to Action

For Founders

If you have enterprise AI infrastructure experience and want to build the trust layer for AI work, let’s talk. This market is moving fast, and the window for a new entrant is open now.

For Investors

This is infrastructure for the AI agent explosion. Every company deploying AI agents will need verification. The question isn’t if, but who builds it first.

For Enterprises

If you’re deploying AI agents for knowledge work and worried about hallucinations, errors, and compliance, be a design partner. Help shape the solution.

The AI delegation revolution is here. The trust crisis is real. Witness is the answer.
