

BodyOS

The Unified AI Operating System for Human Physiology

Tagline: *“Your body is a system of systems. Finally, an AI that understands that.”*

Executive Summary

Health tech is broken. We have 400,000+ health apps tracking isolated metrics—steps here, sleep there, heart rate somewhere else. But the human body isn’t a collection of independent dashboards. It’s an intricately connected system where cardiovascular, metabolic, neurological, immune, and musculoskeletal systems constantly interact.

BodyOS is the first AI operating system that models your entire physiology as a unified whole. By integrating data from wearables, labs, genetics, and medical records, BodyOS creates a living digital twin of your body’s systems—understanding not just what’s happening, but *why* it’s happening and what’s coming next.

This isn’t another health app. It’s the intelligence layer that makes sense of everything.

\$85B+ market opportunity. The future of personalized medicine. Category-defining.

The Problem: Fragmented Health, Fragmented Understanding

The Data Explosion, Intelligence Gap

The average health-conscious consumer generates: - **2.5M data points** from wearables annually - **47 different health metrics** across apps - **12+ data sources** (watches, scales, CGMs, rings, apps) - **0 unified understanding** of what it all means

Why Current Solutions Fail

Approach	Fatal Flaw
Fitness Wearables	Single-metric obsession (steps, HRV, sleep score)
Health Aggregators	Data dashboards, not intelligence
Telemedicine	Episodic, reactive, no continuous model
Electronic Health Records	Provider-centric, fragmented, static
Consumer Health AI	Chatbots, not physiological understanding

The Missing Layer

No existing solution answers the questions that matter:

- *“Why do I feel exhausted even though I slept 8 hours?”*
- *“How is my stress affecting my blood sugar?”*
- *“What’s causing my inflammation to spike?”*
- *“Why do I crash every afternoon?”*
- *“How are my medications interacting with my lifestyle?”*

These questions require understanding the body as a **system of systems**—not isolated metrics.

The Solution: BodyOS

A Living Model of You

BodyOS creates a **Physiological Digital Twin**—a continuously updated model of your body’s interconnected systems:

How It Works

- 1. Universal Data Ingestion** - Apple Health, Google Fit, Samsung Health - Wearables: Oura, Whoop, Garmin, Apple Watch, Fitbit - CGMs: Dexcom, Libre, Levels - Smart scales, blood pressure monitors, pulse oximeters - Lab results (Quest, Labcorp, direct-to-consumer) - Genetic data (23andMe, Ancestry, whole genome) - Medical records via FHIR/HL7
- 2. Physiological Modeling Engine** Our proprietary AI doesn’t just aggregate—it models: - Cross-system interactions (how sleep affects glucose affects mood) - Individual baselines and deviation patterns - Circadian rhythms and temporal patterns - Adaptive learning from your unique physiology
- 3. Causal Inference, Not Correlation** BodyOS goes beyond “X correlates with Y” to understand: - Root causes of symptoms - Cascade effects across systems - Intervention impact prediction - Personalized response patterns
- 4. Proactive Intelligence** - Early warning detection (issues before symptoms) - Trend identification and trajectory modeling - Intervention recommendations with predicted outcomes - Provider-ready reports and insights

Core Product Capabilities

System Health Dashboard

See all your body systems at a glance with real-time health scores:

System	Score	Trend	Key Insight
Cardiovascular	82/100	↑	HRV improving with new sleep schedule
Metabolic	71/100	↓	Glucose variability elevated—investigate
Immune	88/100	→	Stable; inflammation markers normal
Neurological	65/100	↓	Sleep quality impacting cognitive load
Musculoskeletal	79/100	↑	Recovery from training adapting well

Causal Insight Engine

“Why am I feeling this way?” finally gets an answer:

Example Output: > **Energy Crash Analysis (3:00 PM Daily)** > > Primary Factor: Post-lunch glucose spike (+82 mg/dL) followed by reactive hypoglycemia > Contributing Factors: > - Inadequate sleep REM (12% vs. your baseline 18%) > - Morning caffeine timing (cortisol interference) > - Lunch composition (high glycemic load) > > Recommended Experiment: Try protein-first lunch + 10-min post-meal walk. Predicted outcome: 40% reduction in afternoon fatigue.

Predictive Health Trajectories

See where you’re heading, not just where you are:

- **30-day metabolic forecast** based on current patterns
- **Risk trajectory modeling** for chronic conditions
- **Recovery time predictions** for illness and injury
- **Optimal intervention windows** for maximum impact

Provider Collaboration Portal

Share intelligent summaries with your healthcare team:

- Auto-generated visit prep reports
- Longitudinal trend analysis
- Medication effect tracking
- Lab result contextualization
- Care gap identification

N=1 Experimentation Engine

Run personalized experiments on yourself:

1. **Hypothesis:** “Cutting evening carbs will improve my sleep”
2. **BodyOS designs:** 2-week protocol with metrics to track
3. **Automated monitoring:** Tracks all relevant variables
4. **Statistical analysis:** Determines if effect is real for YOU
5. **Actionable result:** “Confirmed. Evening carb restriction improved your deep sleep by 23% with $p < 0.05$ ”

Technology Architecture

Physiological Knowledge Graph

BodyOS is built on a proprietary **Human Physiology Knowledge Graph** containing:

- 50,000+ physiological relationships
- 12,000+ documented cross-system interactions

- 8,000+ medication/supplement interactions
- 5,000+ lifestyle-physiology connections
- Continuously updated from medical literature

Multi-Modal Temporal Fusion

Our AI processes: - **Time-series data** (continuous wearable streams) - **Point-in-time data** (lab results, measurements) - **Episodic data** (symptoms, events, medications) - **Static data** (genetics, demographics, history)

All fused into a coherent temporal model of individual physiology.

Privacy-First Architecture

- End-to-end encryption
- Zero-knowledge computation options
- User-owned data with granular sharing controls
- HIPAA, GDPR, SOC 2 compliant
- On-device inference for sensitive processing

Market Opportunity

Total Addressable Market: \$85B+

Segment	TAM	Growth
Digital Health & Wellness	\$42B	28% CAGR
Remote Patient Monitoring	\$18B	32% CAGR
Precision Medicine Platforms	\$15B	24% CAGR
Consumer Health AI	\$10B	45% CAGR

Why Now

1. Data Availability Inflection - 500M+ wearable devices shipping annually - CGM going mainstream (non-diabetic users up 340%) - Home lab testing normalized post-COVID - Interoperability mandates (21st Century Cures Act)

2. AI Capability Breakthrough - Multi-modal foundation models enable true physiological reasoning - Causal inference at scale now possible - Personalized AI finally practical

3. Consumer Demand Surge - 78% want more control over health data - 65% frustrated with fragmented health apps - Longevity movement going mainstream - Proactive health mindset post-pandemic

4. Healthcare System Pressure - Provider shortage driving remote/AI care - Value-based care requires continuous monitoring - Chronic disease costs unsustainable (\$4.1T annually)

Business Model

B2C: Premium Consumer

BodyOS Personal — \$29/month or \$249/year

- Unlimited data integration
- Full physiological modeling
- AI insights and recommendations

- N=1 experimentation
- Provider sharing portal

BodyOS Pro — \$79/month

- Everything in Personal
- Advanced biomarker tracking
- Genetic integration and analysis
- Longevity trajectory modeling
- Concierge health coaching AI
- Priority support

B2B2C: Enterprise Wellness

BodyOS for Employers — \$15/employee/month

- Employee wellness platform
- Population health insights (anonymized)
- Preventive care optimization
- Healthcare cost reduction analytics
- Integration with benefits platforms

BodyOS for Insurers — Revenue share model

- Risk stratification enhancement
- Preventive intervention targeting
- Claims cost reduction
- Member engagement boost

B2B: Healthcare Providers

BodyOS Clinical — \$500/provider/month

- Patient remote monitoring
- Between-visit intelligence
- Care gap identification
- Chronic disease management
- EHR integration

Go-to-Market Strategy

Phase 1: Quantified Self Power Users (Months 1-12)

Target: The 5M+ “quantified self” enthusiasts who already track everything but lack integration.

Channels: - Health/biohacking influencer partnerships - Podcast sponsorships (Huberman, Attia, Found My Fitness) - Reddit communities (r/quantifiedself, r/Biohacking, r/longevity) - Product Hunt, Hacker News launch - Wearable company app store features

Goal: 100K paying users, 4.5+ app store rating

Phase 2: Health-Conscious Mainstream (Months 12-24)

Target: The 50M+ Americans who own wearables and care about health.

Channels: - Wearable partnership bundles (Oura, Whoop integrations) - Health system partnerships - Employer wellness channels - DTC marketing at scale

Goal: 1M paying users, brand recognition

Phase 3: Healthcare System Integration (Months 24-36)

Target: Provider organizations, payers, employers.

Channels: - Health system sales team - Payer partnerships - Benefits platform integrations - Employer direct sales

Goal: 100+ enterprise accounts, \$50M ARR

Competitive Landscape

Why We Win

Competitor	Their Approach	BodyOS Advantage
Apple Health	Data aggregation only	True physiological intelligence
Oura/Whoop	Single-device metrics	Multi-source unified model
Levels	CGM-only focus	Full-body integration
InsideTracker	Point-in-time labs	Continuous + lab fusion
Noom/weight apps	Behavior tracking	Physiological understanding
Teladoc/telehealth	Episodic care	Continuous intelligence

Defensibility

1. **Data Network Effects:** More users = better models = better insights = more users
 2. **Physiological Knowledge Graph:** Years of curation, continuously improving
 3. **Individual Learning:** Your BodyOS gets smarter about YOU over time
 4. **Integration Breadth:** First to unify 50+ data sources meaningfully
 5. **Clinical Validation:** Peer-reviewed accuracy studies planned
-

Traction & Validation

Pre-Launch Signals

- **47,000 waitlist signups** from landing page (no paid marketing)
- **Letter of Intent** from Top 10 health system for pilot
- **Partnership discussions** with 2 major wearable companies
- **Advisory commitments** from former Apple Health, Google Fit leads
- **Clinical collaboration** with Stanford Precision Health

Early Research

- Pilot study (n=500): 73% of users reported “significantly better understanding” of their health
 - Correlation with clinical outcomes: 0.84 alignment with physician assessments
 - User engagement: 4.2x daily opens vs. category average
-

Team

Leadership

CEO: Former VP Product at Oura, ex-Google Health PM - 15 years health tech experience - Led Oura's 10x growth phase - Stanford MBA, MD background

CTO: Former Principal Engineer at Apple (Health team) - Architected Apple HealthKit data fusion - 20 patents in health data processing - PhD Biomedical Informatics, MIT

Chief Medical Officer: Former Chief Health Officer, Aetna - 25 years clinical and health system experience - Pioneer in value-based care - MD Harvard, MPH Johns Hopkins

VP AI: Former Research Scientist, DeepMind Health - Led AlphaFold applications to human health - 50+ publications in AI/health - PhD Machine Learning, Cambridge

Advisors

- Former Surgeon General of the United States
- Co-founder, Levels
- Chief Digital Officer, Mayo Clinic
- Partner, a16z Bio Fund

Funding & Use of Funds

Raising: \$15M Seed

Category	Allocation	Purpose
Engineering	50%	Core platform, integrations, AI
Clinical/Science	20%	Validation, knowledge graph
Go-to-Market	20%	Launch, early growth
Operations	10%	Legal, compliance, infrastructure

Milestones to Series A

1. **Product:** Full platform launch with 30+ integrations
2. **Users:** 100K paying subscribers
3. **Revenue:** \$3M+ ARR
4. **Clinical:** Published validation study
5. **Enterprise:** 5+ B2B customers live

Previous Funding

- \$2M pre-seed (angels, health tech executives)
- Founders have invested \$500K personally

Vision: The Future of Personal Health

BodyOS is the foundation for a future where:

- **Every person has a living model of their body** that learns and adapts
- **Healthcare is proactive**, catching issues before they become problems
- **Doctors have complete context**, not fragments of information
- **Interventions are personalized**, based on your unique physiology
- **Health optimization is accessible**, not just for the wealthy

We're not building another health app. We're building the **operating system for human health**—the layer that finally makes sense of the complexity of the human body.

Investment Highlights

Massive Market: \$85B+ TAM in high-growth digital health

Perfect Timing: Data availability + AI capability + consumer demand aligned

Unique Approach: First true physiological intelligence, not just aggregation

Strong Team: Ex-Apple Health, Google, Oura, DeepMind leadership

Early Traction: 47K waitlist, health system LOI, wearable partnerships

Clear Monetization: Proven subscription + enterprise model

Defensible Moats: Data network effects + proprietary knowledge graph
