

ModelLedger — The Enterprise System of Record for AI Assets

“Finally, a single source of truth for every AI model, dataset, and deployment in your organization.”

The Billion-Dollar Problem

Enterprises are drowning in AI chaos.

The average Fortune 500 company now has **400+ AI models** in production — and growing 3x year-over-year. But there’s no system of record. No single source of truth. No way to answer basic questions like:

- Which models are deployed where?
- What data trained each model?
- Who approved this model for production?
- Are we compliant with the EU AI Act?
- How much are we spending on inference?
- What happens if a training dataset is found to be tainted?

This is the messy reality:

- Models scattered across AWS, Azure, GCP, and on-prem
- Training data in S3, Snowflake, Databricks — and nobody knows what was used
- Shadow AI proliferating in every department
- Compliance teams manually chasing down model cards
- Security has no visibility into model vulnerabilities
- Finance can’t attribute AI costs to business units

The consequences are catastrophic:

- **\$2.1B**: Average cost of AI compliance violations (post-EU AI Act)
- **67%**: Enterprises that can’t audit their AI model inventory
- **45 days**: Average time to respond to AI regulatory inquiries
- **\$340M**: Largest AI-related fine to date (discrimination in lending)

Without a system of record for AI, enterprises are flying blind into a regulatory buzzsaw.

The Solution: ModelLedger

The enterprise system of record for AI assets.

ModelLedger provides:

Universal Model Registry

- **Auto-discovery**: Automatically find and catalog every AI model across all environments
- **Version control**: Track every model version with full lineage
- **Metadata management**: Rich tagging, search, and organization
- **Cross-platform**: One registry across AWS, Azure, GCP, Databricks, Snowflake, and on-prem

Complete Data Lineage

- **Training data tracking**: Know exactly what data trained each model
- **Data provenance**: Full chain of custody for every dataset
- **Impact analysis**: When data is flagged, instantly identify affected models
- **PII tracking**: Automated detection and documentation of sensitive data usage

Compliance Automation

- **EU AI Act:** Automated risk classification, documentation, and reporting
- **NIST AI RMF:** Built-in framework mapping and gap analysis
- **Model cards:** Auto-generated, always up-to-date documentation
- **Audit trails:** Every action logged for regulatory inquiry response

Operational Intelligence

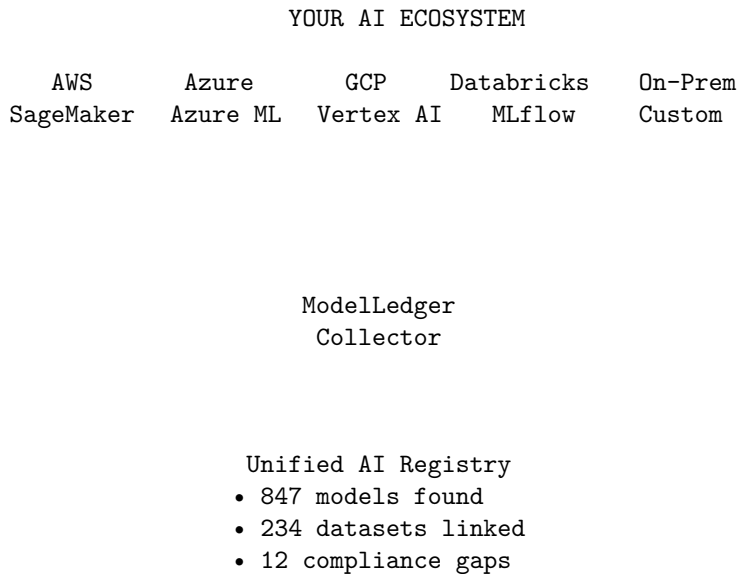

- **Performance monitoring:** Track model drift, accuracy, and health
- **Cost attribution:** Per-model, per-inference cost tracking by business unit
- **Usage analytics:** Who's using what, when, and how
- **Anomaly detection:** Early warning for model degradation or misuse

Risk Management

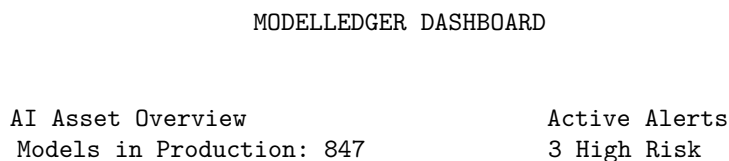

- **Bias detection:** Continuous fairness monitoring
 - **Security scanning:** Vulnerability assessment for models and dependencies
 - **Access control:** Fine-grained permissions and audit logging
 - **Incident response:** Rapid model quarantine and rollback capabilities
-

How It Works

Phase 1: Discovery & Ingestion

Phase 2: Continuous Intelligence

Models in Development: 1,234	7 Medium Risk
Total Datasets: 456	12 Low Risk
Monthly Inference Cost: \$2.3M	

Compliance Status	Cost by BU
EU AI Act: 94% Ready	Marketing: \$450K
NIST RMF: 87% Aligned	Risk: \$380K
Model Cards: 234 Outdated	Product: \$290K
	Sales: \$180K

Recent Activity

- fraud-detector-v7 deployed to prod (2h ago)
- customer-churn-model flagged for drift (4h ago)
- 12 new models discovered in shadow deployment (1d ago)

Phase 3: Regulatory Response

Scenario: Regulatory Inquiry Received

"Provide complete documentation for all models using customer financial data within 5 business days."

Traditional Response:	ModelLedger Response:
• Manual data request • 45+ days scrambling • Incomplete records → • \$500K external help • Potential violations	• Query: 2 minutes • Export: 5 minutes • Complete package • Auto-generated docs • Audit-ready
Time: 45 days	Time: < 1 hour
Cost: \$500K+	Cost: \$0 (already done)
Risk: High	Risk: Minimal

Market Opportunity

Total Addressable Market (TAM): \$47B

Enterprise AI Governance & Management: - AI/ML Platform Market: \$32B (2026) - AI Compliance & Risk: \$8B (2026) - Data Governance: \$7B (2026 AI-specific)

Serviceable Addressable Market (SAM): \$12B

- Fortune 2000 enterprises with >50 AI models
- Regulated industries (finance, healthcare, insurance)
- Companies subject to EU AI Act

Serviceable Obtainable Market (SOM): \$1.2B

- Year 5 target: 1,500 enterprise customers
- Average contract value: \$800K/year

Why Now?

1. **EU AI Act** is now in full enforcement — compliance is mandatory
 2. **Model proliferation** is exponential — chaos is unsustainable
 3. **AI costs** are material line items — CFOs demand accountability
 4. **Shadow AI** is epidemic — 78% of enterprises have unauthorized AI deployments
 5. **Regulatory velocity** is accelerating — new rules quarterly
-

Competitive Landscape

Current Solutions Are Insufficient

Solution	Weakness
MLflow	Dev-focused, no compliance
Weights & Biases	Training-centric, limited governance
DataRobot	Platform-locked, not a registry
Databricks Unity Catalog	Data-focused, weak model governance
AWS/Azure/GCP native	Single-cloud, no cross-platform
Manual spreadsheets	Unscalable, error-prone

ModelLedger's Unfair Advantages

1. **Universal coverage:** Every cloud, every framework, every deployment
 2. **Compliance-first:** Built from the ground up for regulatory requirements
 3. **Automatic lineage:** No manual documentation required
 4. **Real-time intelligence:** Not a static catalog, a living system
 5. **Enterprise-grade:** SOC 2, HIPAA, FedRAMP ready from day one
-

Business Model

Pricing Tiers

Tier	Models	Price	Target
Starter	Up to 100	\$50K/year	Mid-market
Professional	Up to 500	\$200K/year	Enterprise
Enterprise	Unlimited	\$500K-2M/year	Fortune 500
Strategic	Custom	\$2M+/year	Global enterprises

Revenue Drivers

1. **Platform subscriptions** (70% of revenue)
 - Seat-based + model-based pricing
 - Annual contracts with 3-year enterprise deals
2. **Compliance modules** (20% of revenue)
 - EU AI Act module: +\$100K/year
 - NIST RMF module: +\$75K/year
 - Industry-specific: +\$50-150K/year
3. **Professional services** (10% of revenue)
 - Implementation: \$50-200K
 - Compliance audits: \$25K/engagement
 - Custom integrations: \$100K+

Unit Economics

- **CAC:** \$150K (enterprise sales motion)
 - **ACV:** \$400K average (blended)
 - **LTV:** \$2.4M (6-year lifespan, strong retention)
 - **LTV:CAC:** 16:1
 - **Gross margin:** 85%
 - **Payback period:** 5 months
-

Go-to-Market Strategy

Phase 1: Regulated Industries (Months 1-18)

Primary targets: - Financial services (banks, insurance, asset management) - Healthcare & life sciences - Government contractors

Why: - Highest regulatory pressure (EU AI Act, NIST, SEC) - Budget for compliance - Complex AI portfolios - Strong risk culture

Motion: - Direct enterprise sales - Compliance-led messaging - Executive sponsorship from CISO, Chief AI Officer, CCO - POC in 30 days, production in 90 days

Phase 2: Technology & Retail (Months 12-36)

Targets: - Technology companies with AI products - Retail & consumer (personalization, pricing AI) - Manufacturing (predictive maintenance, quality)

Why: - High model counts - Cost attribution needs - Operational efficiency drivers

Phase 3: Full Market (Months 24+)

Targets: - All enterprises with >10 AI models - Global expansion (APAC, LATAM) - Public sector

Partnerships: - Big 4 consulting (implementation partners) - Cloud providers (marketplace listings) - GRC platforms (integration partnerships)

Product Roadmap

Q1-Q2 2026: Foundation

- Universal model discovery (AWS, Azure, GCP)
- Data lineage engine
- EU AI Act compliance module
- Model card auto-generation

Q3-Q4 2026: Intelligence

- Real-time drift detection
- Cost attribution dashboard
- Bias monitoring
- Custom compliance frameworks

2027: Platform Expansion

- Self-service model registration API
- Developer SDK & CLI

- Marketplace for compliance templates
- AI agent governance module

2028: Ecosystem

- Third-party model marketplace integration
 - Automated remediation
 - Predictive compliance
 - Industry-specific modules (ISO 42001, FDA AI/ML)
-

Founding Team Requirements

CEO / Co-founder

- Enterprise SaaS background
- Experience selling to CISO/CTO/CCO
- AI/ML industry credibility
- Fundraising experience (\$50M+)

CTO / Co-founder

- ML infrastructure at scale
- Data platform architecture
- Experience with compliance/security products
- Technical leadership (50+ eng team)

VP Engineering

- Enterprise software development
- Multi-cloud expertise
- SOC 2 / FedRAMP experience

VP Product

- AI/ML platform product management
- Enterprise GTM experience
- Regulatory product expertise

VP Sales

- Enterprise security/compliance sales
 - \$10M+ quota attainment
 - MEDDIC/MEDDPICC methodology
-

Financial Projections

Metric	Year 1	Year 2	Year 3	Year 4	Year 5
Customers	25	100	350	800	1,500
ARR	\$8M	\$40M	\$150M	\$400M	\$900M
Revenue	\$6M	\$32M	\$120M	\$340M	\$800M
Gross Margin	80%	82%	85%	86%	87%
Net Revenue Retention	130%	140%	145%	140%	135%

Metric	Year 1	Year 2	Year 3	Year 4	Year 5
Headcount	45	150	400	800	1,400
Burn Rate	\$12M	\$35M	\$60M	\$80M	Cash positive

Funding Strategy

Round	Amount	Timing	Milestones
Seed	\$8M	Q2 2026	MVP, 5 design partners
Series A	\$30M	Q1 2027	\$8M ARR, 25 customers
Series B	\$80M	Q1 2028	\$40M ARR, 100 customers
Series C	\$150M	Q2 2029	\$150M ARR, category leader
Series D	\$250M	Q1 2030	\$400M ARR, IPO prep

Total capital raised: ~\$520M Path to profitability: Q4 2030 IPO target: 2031

Risk Analysis & Mitigation

Risk	Probability	Impact	Mitigation
Cloud providers build native	High	High	Stay multi-cloud, deeper governance
MLOps vendors expand	Medium	Medium	Compliance moat, enterprise focus
Slow enterprise adoption	Medium	High	Land-and-expand, prove ROI fast
Regulatory uncertainty	Low	Medium	Modular compliance, adaptable
Economic downturn	Medium	Medium	Position as risk reduction, not cost
Talent competition	High	Medium	Equity, mission, remote-first

Success Metrics

Year 1 Targets

- 25 enterprise customers
- \$8M ARR
- <12 month payback
- NPS >60
- 95%+ retention

Year 3 Targets

- 350 enterprise customers
- \$150M ARR

- Category leadership (Gartner MQ)
- 145% net revenue retention
- Global presence (EU, APAC offices)

Year 5 Exit Indicators

- \$900M+ ARR
 - 40% market share in AI governance
 - IPO-ready financials
 - Acquisition interest from major platforms
-

The Ask

For Investors

- Seed round: \$8M for 15%
- Lead investor with enterprise SaaS expertise
- Board seat for lead
- Strategic value-add: introductions to Fortune 500 CAIOs/CISOs

For Talent

- Founding engineering team: 8 hires
- First sales team: 4 hires
- Product & design: 3 hires
- Competitive equity packages (0.25-1.5%)

For Design Partners

- 5 Fortune 500 companies
 - Free deployment during beta
 - Direct roadmap input
 - Guaranteed early adopter pricing
-

Why This Will Be a Billion-Dollar Company

1. **Inevitable market:** Every enterprise will need AI governance. It's not optional.
 2. **Perfect timing:** EU AI Act enforcement + model proliferation + AI cost explosion
 3. **Enduring value:** System of record becomes deeply embedded — high switching costs
 4. **Platform expansion:** Registry → Compliance → Operations → Marketplace
 5. **Multiple exit paths:** IPO, acquisition by Salesforce/Microsoft/ServiceNow
 6. **Category creation:** Define “AI Asset Management” as a new enterprise software category
